Flowerism reform bill amendment [draft]:.....	23
Glossary:	25

Notes of commencement:

It is imperative that one must completely and utterly fathom the meaning of the following. Thus, i present a lesser glossary for the purposes of terminology.

Austria/Austrian empire:

It is of utmost importance one fathoms the difference between Austria and Australia, due to the absence of Australia's mention, replaced by Austria.

Definition: The Austrian Empire [1804-1867], ruled over by the absolute monarchy of the Habsburgs and presided upon a highly multiethnic domain of which possessed the title of great power due to its immense stature.

Prussia:

I fathom one would confuse the states of both Prussia and Russia, for the title of Prussia is highly akin, even perhaps linguistic duplicates, only with Prussia possessing a “p” as its first letter rather than an r. however still holding such, only as the 2nd letter

Definition: Prussia [1701-1918], a highly nationalistic, militaristic, absolute monarchy, which united the germen principalities into the later germen empire.

State:

Additionally, one must recognize the difference between the dual definitions of state of which are both to be utilized [additionally there is a third, which is nearly unused].

Definition [a]: a commonly independent formulation of governance, synonymous with country or government.

Definition [b]: a region of governance akin to that of the province.

Definition [c]: to be and or the fact or position of being.

One; The issue of entropy:

Entropy. *Within a closed system, entropy will indefinitely either increase or be nullful of change. However, its entropic mass will never face the fate to be lessened. Thus, maximum entropy is inevitably the fate of all things within reality.*

One example of this phenomenon is the organism. Nearly the entirety of organisms begin their life's nearly null of entropy. Nonetheless, little "entropic puddles" are conjurerated. They start out small, perhaps a little crack on the bone forms. Maybe a cell doesn't copy just right. Perhaps a minuscule deviance between the mental and physical realms is conjurerated. However, you must observe a fact observed in the last paragraph: "Within the closed, entropy will indefinitely either increase or be nullful of change", and thus, inevitably the bones shall be crippled and shattered. A cancerous mass forms of lethal proportions. Replacing the once perfect mental mirror lies a painting of oneself a unicorn! Next, entropy cruelly devours the organism, resulting in death.

Thus, there is no such occurrence of "death by old age." The true assassin is entropy and thus "death by entropy".

Tragically, nothing is immune to the inevitable fate that entropy conjures. Even the state is not invincible. The state is akin to the organism. The state is destined to accumulate entropy. For an example I present the Austrian Empire [later referred to in its so-called “life” as the Austro-Hungarian empire].

The Austrian Empire of the early 1800s, was a state to be respected. However, as the organism accumulated entropy, the empire additionally had to face the formation of its own entropic puddles.

One of these puddles was growing nationalism. Its threat to the empire was the lessening of imperial territory. Nationalism threatened to initiate the degradation of its imperial borders, into a reflection of ethnic lines [which would be a miracle or great misfortune, depending on who you ask]. If nationalism was a tiger, then Austria was to be its prey, and the nationalistic tiger was to conduct its onslaught in the year of 1848. During the year of 1848, rebellions rose across the Austrian realm, akin to a ravenous tumor. Austria’s attempts to vanquish the rebellions were futile. The empire pleaded to the Russian tsardom, in an act of self-preservation. The tsardom chose to spare Austria from the wrath of the tiger. Nonetheless, the Austrian monarch was abdicated. Due to Austria’s choice not to aid the Russian empire in the Crimean war, there would be no more help from the tsardom. The revolutionaries were emboldened as a chess player who had only minutes ago conquered magnus Carleson. The largest entropic puddle in the domain of possibility may have been thwarted from forming, but another mass of great magnitude had emerged.

Another threat was the rising Prussian empire, eclipsing Austria in Geminian politics. Which came to fruition in the Austro-Prussian war. If nationalism was a tiger, then Prussia was to be the apex of the food chain. Prussia vanquished Austria and thus claimed victory. The

Austrian imperium was forever humiliated and shattered into two states in a gambit of self-preservation and thus Austria-Hungary was born. The new imperium was weaker than its predecessor due to the veto power of the two states, thus making it harder to coordinate. The dual empire's position was akin to that of a person with their brain split in two.

Surely enough, the imperium crumbled under its own weight and the pressure of World War 1 during the early 20th century. due to its lethal entropic puddles, consuming the state resulting in death. Thus, this is the textbook example of "Death by entropy".

*Firing a nuclear bomb would be highly inappropriate if the cause was A simple deer being consumed by entropy. However, the state's wellbeing can affect millions of people. Additionally, a state turning to tyranny is also a threat worth much consideration. In order to illustrate this claim further, I must state if you asked the goals of someone writing a constitution, they would likely say something akin to: "to avoid the state [or body of power influenced by this document] turning to the ways of tyranny and incompetence ". Or perhaps death by entropy? However, if maximum entropy is the conclusion of all things, no matter how well-oiled your document is, it will still submit to entropy. So shall we adopt nihilism as our state, no, For I present "**Flowerism**".*

Two; the presentation of Flowerism:

Flowerism; noun; the belief in commanding natural selection in order to harness entropy to modify or form systems.

Due to the inevitability of maximum entropy, it would be impossible to prevent the slow devouring of the state. However, entropic puddles do not necessarily have to threaten the state. Entropy is a manifestation of chaotic events resulting in unpredictability. Entropy does not only dangerous events. Through an algorithm one may hypothetically filter a flood of beneficial entropic events to heal the state.

An argument for this claim would be of the organism once again. During part one, we observed the organism's susceptibility to the entropic puddle. In order for life to exist, it must be able to combat the ever-expanding abyss of entropy. However, entropy is invincible. Some believe that the organism fought this by filtering entropy through natural selection. Thus, since the organism persists through Flowerism so shall the state.

In order to further prove and conduct the demonstration of Flowerism I present a simulation.

Rules:

I-in a step the base equation is modified by a random process generated by the table below [1-4/1d4]:

1	=	+	P=	[1-4/1d4]
2	=	-	M=	[1-4/1d4]
3	=	/	D=	[1-4/1d4]
4	=	*	E=	[1-4/1d4]

For the sake of the simulation, I plead for you to assume that each of the results of a step is the formulation of a law or bill [total=total wellbeing if people, higher=greater wellbeing].

Within the simulation there are 2 variables. One will be named “f” and the other will be named “i”. The former F represents a state that has adopted the practices [view within “part four-the manual of the flower”] of Flowerism. The latter represents a state that has not adopted the practices of Flowerism.

The steps below are grouped in order of process. Complete the steps in simulacrum F before moving onto simulacrum T.

F [must complete all in order to complete 1 simulation step] -process:

Step 1. the equation which formulates the highest total will be reconjured 3 times [remove the rest].

Step 2. add a random step within the equation originating from the table above to each of the equations [random for each]

T [must complete all in order to complete 1 simulation step]-Process

Step 1. add a random step within the equation originating from the table above to the equation.

Once the 5 steps are completed, the simulation will end and we shall compare the 2 numerals representing the dual simulacrums.

And now we commence the simulation [I hope you will attempt to replicate the results if feasible]:

Step 1: F: $a=0+4$, $b=0+4$, $c=0/3$. A/B?

*Step 2: F: $a=4/2$, $b=4+4$, $c=4*1$. B*

*Step 3: F: $a=4+4+1$, $b=4+4/4$, $c=4+4*4$. C*

*Step 4: F: $a=4+4*4/3$, $b=4+4*4+1$, $c=4+4*4-3$. B*

*Step 5: F: $a=4+4*4+1-2$, $b=4+4*4+1*2$, $c=4+4*4+1+1$. B=66*

66-70					<i>F [66]</i>
61-65					<i>F [66]</i>
56-60					<i>F [66]</i>
51-55					<i>F [66]</i>
46-50					<i>F [66]</i>
41-45					<i>F [66]</i>
36-40					<i>F [66]</i>

31-35			$F [32]$	$F [33]$	$F [66]$
26-30			$F [32]$	$F [33]$	$F [66]$
21-25			$F [32]$	$F [33]$	$F [66]$
16-20			$F [32]$	$F [33]$	$F [66]$
11-15			$F [32]$	$F [33]$	$F [66]$
6-10		$F [8]$	$F [32]$	$F [33]$	$F [66]$
1-5	$F [4]$	$F [8]$	$F [32]$	$F [33]$	$F [66]$
F	Step 1	Step 2	Step 3	Step 4	Step 5

Step 1: $T1=0-2$

Step 2: $T2=-2+3$

Step 3: $T3=-2+3/1$

Step 4: $T4=-2+3/1*2$

Step 5; $T5= -2+3/1*2*1. T=2$

2				$T [2]$	$T [2]$
1		$T [1]$	$T [1]$	$T [2]$	$T [2]$
0		$T [1]$	$T [1]$	$T [2]$	$T [2]$
-1		$T [1]$	$T [1]$	$T [2]$	$T [2]$
-2	$T [-2]$	$T [1]$	$T [1]$	$T [2]$	$T [2]$
T	Step 1	Step 2	Step 3	Step 4	Step 5

Thus, $F-T=64$.

In conclusion, it appears as if the simulation immensely proved that the state of the flower was greater than the state that had not adopted the practices of Flowerism. However, the results I conjugated were of high probability to exist as an uber extreme example. Additionally, I would gamble that you see on your paper T being greater than F . However, most of you had F being much greater than the value of T .

Thus, viva la Flowerism

Three; a series of arguments for the practices of Flowerism:

For those who place their disbelief upon the power of Flowerism, I present a series of arguments for the practice of Flowerism. For those who do not place their disbelief upon the practice, I suggest you still read this section for the purpose of the viewing of confessions.

One: Those with a keen eye may have perhaps noticed there is a flaw with the threat of entropy to the state and present a confession: The state is not to be categorized as a closed system but rather an open system, possessing entropy in the form of territory, population, the economy, foreign diplomacy, stability, bureaucracy and corruption. The forms in this open system affect each other and are additionally affected by the outside of the state. However, I do not believe these operations are practical or sustainable over the long term.

- 1. “The vent”: The vent is the process of which the state eliminates the entropy within the population through expulsion.*

There are two ways the state expels its population: Allowing population to leave the borders of the state or banishing the population [akin to the methodologies of the Cuban state].

- 2. Selling or surrendering the land of which the entropy is possessed [akin “cutting off the arm with cancer”].*

I believe the former is greater in comparison to the latter [if the predicament is that of population], however the latter can combat entropy from the land and people, while the former may only combat the entropy of which rests within the population of which is the former’s field of expertise and specialization. Nonetheless, it lay within the perspective that the valve is impractical, due to the methodology of the ladder is akin to that of “cutting off the arm with cancer”. The former, though superior to the latter, appears to be far to akin. Additionally, it possesses the highest of potentials to lead past the event horizon of utter catastrophe [view the state of Cuba].

War: it is highly common throughout the great chronicles of history for a state to import and export the entropies of stability through the processes of war. A potential example of the imperial practice would be the Russo-Ukrainian war. The imperium of the USSR collapsed and dissolved due to internal pressures. Due to the immense collapse of the Soviet empire, it had been banished from the category of the superpower, Thus, the disgraced imperium now possessing the title of great power, with a fathomless thirst for retribution and the reconquest of its imperial glory, declared war on the state of Ukraine, a past holding of the imperium.

One perhaps would observe the motive of the war as one of which is goal would be categorized under that which would be a restoration of stability and imperium. That which would be to export its entropy through the proceeds of war.

However, the issue of this system is one which i utterly fathom and with near certainty, you to have already experienced and formulated, of which is the issue of risk. The issue of risk i deem is that war is a matter of probability. For the purposes of presentation, I shall continue with the tale of the Russo-Ukrainean war.

The imperium fathomed a quick and decisive invasion. However, the roll of the dice of conquest rolled the side of 1. Thus, it was slow and humiliating. When i was born the state of Russia was a gargantuan and formidable beast, however, in the chronicles of the present the Russian imperium, in my eyes and likely many others, the Russian state has been demoted from great power to lesser power, and that is the risk of war

“The Versailles”: “the Versailles” is coined after the palace of Versailles, used by Louis XIV in order to redirect the entropies of bureaucracy and place them to the matters of great insignificant and municipality, akin to that of the processes of “who gets to put on Loui's shoes”. Thus, centralizing the state. I must confess I have great respect for the methodologies of “the Versailles”, I would even fathom that if the proceeds of Flowerism are to be adapted, the methodology of “the Versailles” will be a reform that will collect grandeurs respect from an algorithm of Flowerism. However, the flaw is that only so much entropy may be lessened by “the Versailles”, for it is only specialized for the proceeds of bureaucracy. However, its decadence was a contributing factor in the French revolution. Perhaps one who uses the methodology shall be wary of such.

“The mimic”: “the mimic” is the concept that one possesses a sufficient imperium within the state’s enablement to formulate laws, in order for that one to do so oneself akin to how the proceeds of Flowerism would mandate it. However, a “the mimic” may only do so far as to perfectly conjurate the illusion of Flowerism or fail to imitate

it. Thus, the mimic is lesser as a substitute for Flowerism. However, “mimics” are of the utmost priority of fostering, for a state that has reformed under the proceeds and customs of Flowerism.

Thus, the most effective and efficient form of the alleviation and minimization of entropy is the practice of Flowerism.

Two: I must address that a minority of you possess a valid concern that Flowerism is but a dire threat to democracy, however i do aspire if Flowerism were to be adopted, its algorithm should be based on that of democracy. Perhaps through a voting system. I additionally fathom it would be best added as a reform.

However, it is highly likely if the methodology of Flowerism were to be adopted, the threat that a dictatorship or regime of the totalitarian will perhaps conduct the proceeds of Flowerism to maximize the totalitarian and tyrannical lies in the range of the possible and likely. However, the hypothetical proposed state will likely use the methodology in order to maximize imperial power as well, and thus Flowerism may be the only way to confront such a threat.

Three: Continuing with the threat of death by entropy, I must illustrate the mechanisms of the accumulation of entropy and thus I possess and thus must present a confession. Entropy may only enter the state during an “instance of entropic growth”. During such an occurrence, one may fathom the instance as a farm failing [“instance of entropic growth”]. The event results in a famine, however soon the farm is rejuvenated and thus so is the population affected by the occurrence. However, a titanic amount of the affected population has died, unenabled, or any other manner of disastrous irreversible event [entropic puddle].

In order to illustrate the phenomenon to the state I present the American civil war.

Within the chronology of the civil war, the southernmost slave states existed within a perpetual state of obliteration within the proceeds of democracy. Thus, in a rebellious attempt to preserve the very vilest of practices, the confederacy formulated its form and thus, seceded, conjugating the lethal war [instance of entropy].

Within the bounds of chronology looming upon the civil war, 169,800 people perished [entropic puddle]. An utterly tragic war.

*Four: I must say that practices and customs quite akin to those of Flowerism have already been attempted, during the spring and autumn period. Of which conjugated a state of unfathomable power, dominated international markets for chronicles greater than 1500 years, a state of such elegance it coined itself the “middle kingdom”, a state of such prowess it collapsed due to its very ego, a state of such greatness it converted its invaders into its culture, a state of such immense prowess its imperium extended upon numerals greater than 11 imperial dynasties, dynastic *China*.*

Upon the primordial eras of the spring and autumn period may be seen perhaps as an environment. Upon the old primeval eras of the mystical and primordial period, a kingdom of which adopted proceeds of great efficiency shall perform a conquest of its neighbors. However, once the conquering state collapsed, its proceeds would be adopted by its inheritors, repeat.

Additionally, upon the later chronology of the dynastic eras of the imperium, many methodologies akin to the spring and autumn period occurred. Due to the mandate of heaven, of which it is that of an origin

of imperial legitimacy. Nonetheless, its influence established a systemization of natural selection, of which possesses 3 phases.

I-China shall be utterly dissolved while within this phase, additionally upon this era, shall lay a fosteration of Flowerism.

II-Upon this phase a grandiose imperial dynasty develops a crucial adaptation which enables the imperium to claim the mandate of heaven.

III-The dominating dynasty crumbles into a gargantuan mass of rivaled imperial dominions, repeating the cyclicity.

Additionally, upon the very latest of dynasties of the dynastical chronology begin to commence the elimination of phase II and the start of the isolationist periods, of which decisively blocked the mass transfer of the idea, simulating a decrease of mutation. Thus, within the early 20th century the Qing Dynasty collapsed

Four; the manual of the flower

I believe it is of the very utmost of importance that the practices of Flowerism are correctly represented within this book. Thus, I present the manual of the flower, for a state which adopts the practices and customs of Flowerism and conducts them with the ways of Flowerism. Additionally, within the most later compositions of this very section, I shall add a reform that would implement the practices and customs of Flowerism to the state.

*One of the most important details of Flowerism is its relation to *surrealism*. I perhaps could have titled this book the “Neo-Surrealism Manifesto.” If you are having issues fathoming this, then I present you with a question: Which of the following would provide the highest benefit to a Flowerist society: Surrealism or the hardest of logic. If you are facing befuddlement at this moment, then I must explain.*

Due to Flowerism involving a trial of mathematics, the most logical study, what is Flowerism to gain from logic if it is a mathematical filter.

Thus, boundless surrealism will feast the Floweriest, filter many great concepts and dismiss the rest. Thus, Flowerism is improved by

surrealism, and with the mechanisms of Flowerism, surrealism will likely prosper with Flowerism.

Thus: Flowerism then surrealism. Which could be translated in more mathematical terms as: Flowerism=surrealism. Additionally, the purpose of surrealism was to create a balance between the logic and innate madness of the self. I fathom it is most evident, Flowerism and Surrealism, combined, can complete this task of state far more easily than either alone. Thus, Flowerism and surrealism are but two sides; of the same coin.

Perhaps you still see Flowerism and surrealism as two different things. Perhaps, due to them possessing different goals. And if so, I do not believe I possess the capabilities to do so. Though I do deeply applaud surrealism [though I do not agree with all the surrealist manifesto's claims], and I do as well hope this will cement a connection between surrealism and Flowerism. The latter, a quiet major purpose for this section.

Now to continue with Flowerism.

The process of Flowerism consists of the 3 phases of Flowerism: blooming, flowering and wilting. Once completed, the 3 phases will repeat akin to cyclicity. One perhaps may reorder them, due to its feasibility.

Blooming: within the proceeds of blooming, terra is assigned to groves. Each grove shall act akin to an independent state; however, must be tied intrinsically with its partners, in order to maximize the state's unity and functionality.

It is of utmost importance that the groves do not equip themselves with nationalism, or the state's functionality will be irreversibly compromised by entropy. Thus, I suggest the very territories of the grove

shall be randomly chosen and null of the continental. Additionally, in order to minimize discard the state must maintain indivision, through the proceeds of the indivision of the grove, of which possesses 3 tenants

I-the terra of the grove shall be null of the continental.

II-the terra of the grove shall be null of the reflections of ethnic and/or political terra.

III- the terra of the grove shall be shifted at a point of which shall be of highest occurrence.

IV- the naming shall be null of any of which may be considered of highest prestige, the concept being akin to that of 4c

Flowering: The proceeds of flowering are imperative to the customs and practices of Flowerism. For this is the very phase of mutation.

I believe it is imperative that the chosen algorithm must be of great competence. Additionally, noise must be minimized. The latter is likely far easier to accomplish than the former; however, it is of the most imperative to accomplish the former.

Perhaps one may observe the algorithm as a mischievous genie, of which once asked to formulate a wish into reality [perhaps the wish of flight] shall formulate it as easy and most likely of possibility [perhaps a bird of gargantuan proportions, is to take hostage the wisher].

I fathom that the bewilderment of the former is best vanquished by the practice of the thought experiment. Thus, fathom you are of the position of being trapped within a room, of which possesses 6 doors of 6 sides and the following text:

“The door of which encompasses a point 240 degrees of door y, is the door of which entering shall lead to freedom and bliss. However, any

other door shall lead you to an abyss. Of which lies beside you is a medium of writing one may place instructions of which shall construct an algorithm of which is omnificent, shall additionally suggest an action of the purposes of escape. However, it is null of the information of door y's location and will not abide by any direction of which would be akin to suggest which door shall send i to the door of freedom and shall not share any info of which is beyond its prementioned suggestion”

However, tragically, you are null of information of which possesses the location of door y.

Of what action shall you commence?

I believe the answer to the predicament is that of prediction, however one must conjure one of the very highest of probabilities. Thus, I believe an answer of most proper may perhaps be that of “the door of which once taken will bestow the highest rating conjugated by me unforced shall be of which you shall suggest to I.

Thus, once carried to the customs and practices of Flowerism, I suggest that of which is akin to the practice of the unforced referendum shall be that of success

Wilting: the proceeds of wilting are that of the utter obliteration of the groves, the gathering of the mutations and that of the formulation of the new conduct.

Additionally, it is utterly imperative for the formulation of the new conduct to be utterly nullified and cleansed of the entropy of corruption. Thus, it is of utmost importance the cosmos shall be null of all such akin, thus i, for the purposes of the aforementioned, to conduct the conjuration of customs in order for a later state to maintain the sanctity of wilting after its start, thus i must present the custom of wilting. I

*believe the state shall map the reforms, akin to the act of copying.
Hereby justify my action by the following.*

“The definition of insanity is to try the same thing over and over again, expecting different results”

-Albert Einstein

However, the parrel groves may not be utterly null of difference, however I truly fathom the grove shall patch any error of feasibility.

It is of the greatest of imperative and importance i must utterly fulfill the promise of which i conjugated at the very commencement of this section [“Additionally, within the most later compositions of this very section, I shall add a reform that which would implement the practices and customs of Flowerism to the state.”]. Thus, i present the following:

Flowerism reform bill amendment [draft]:

[I] Divide the lands of the state by the following algorithm:

Each grove shall be gifted 20percent of the territories [province, county of which I adore most highly, state, etc.] of the state [divided by that of probability].

[IV] One shall utilize the following treaty in order to prevent the dissolution of the state by the groves

1-A formulation of governance shall only be divided upon the groves if a grove has ruled legislation upon it. However, the formulation of

governance shall have its unity safeguarded upon the groves of which have not acted upon such legislation upon the formulation of governance. [note: nonetheless the unity of such formulations shall be preserved, in order to protect the state].

2-All groves shall be nullified of the action to declare war separately from its partners, nor shall it fight war separately, and its functionality to prevent free trade across the state.

[III] One shall use the following algorithm for the purposes of flowering:

Once [the terms of the legislative body] have passed, commence, the following: the citizens of the grove shall conjurate votes deciding upon a =[dissolve] or b =[preserve]. Of which grove possess the highest percentile of b votes shall have its formulated legislation mapped upon the whole of the state.

[Note-a state may nullify the following in order to rather possess a re instable “instance of Flowerism”]

[IV] the utter and absolute unity of the state shall be preserved for another term of legislation.

[V] Repeat the aforementioned.

Glossary:

Akin; adjective; a word used to indicate the relation of similarity.

Austria/Austrian empire; noun; The Austrian Empire [1804-1867] of which ruled over in absolute monarchy by the Habsburgs and presided upon a highly multiethnic domain of which possessed the title of great power due to its immense stature.

Entropy; noun; the law of physics of which mandates the ever increase of chaos and the uncertain, additionally it is utterly synonymous with the aforementioned.

Fathom; verb; [a]: to imagine and/or understand. [b]: a unit of measurement used to measure the depths of the sea.

Flowerism; noun; is the belief in commanding the proceeds of natural selection in order to harness entropy to modify or form systems.

Imperium; noun; an empire, monopoly, league or all other manner of imperialist spheres and such.

Null; adjective; the state or fact of nothing.

Prussia; noun; Prussia [1701-1918], a highly nationalistic, militaristic, absolute monarchy, which united the germen principalities into the later germen empire.

State; noun; [a]: a commonly independent formulation of governance, synonymous with country or government. [b]: a region of governance akin to that of the province. [c] adjective: to be, the fact and/or position of existence.

“All men can see these tactics whereby I conquer, but what none can see is the strategy out of which victory is evolved.”

-Sun Tzu
